

WhatsApp Mail Bot AI

Official Executive Capabilities & iPhone Visual User Manual

1. Executive Overview

WhatsApp Mail Bot AI connects WhatsApp messages, informal notes, voice briefs, and attached documents directly to your Gmail account. Powered by Google's **Gemini AI SDK** and **Pydantic structured output models**, the bot analyzes user intent, extracts recipients, generates formal drafts, and dispatches emails with attachments in real time.

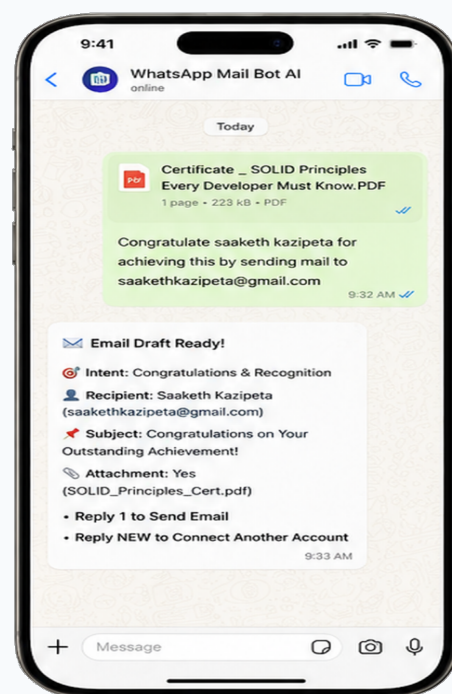

2. System Capabilities Showcase (Visual iPhone Interface)

Explore each system capability below with its corresponding iPhone chat interface mockup. Each section explains the underlying technology and provides instructions on how to test it yourself.

Capability 1: ■ Gemini AI Brief Engine & Intent Extraction

Converts rough, ungrammatical, or fragmented WhatsApp notes into polished, formal executive emails using Gemini Flash models with structured Pydantic schema validation. Automatically categorizes intent (Certificates, Invoices, Sign-Offs, Applications).

■ **How to Try It:** Send any rough note on WhatsApp: *'Tell Sarah budget report for Q3 is ready, ask for review by 4 PM.'*

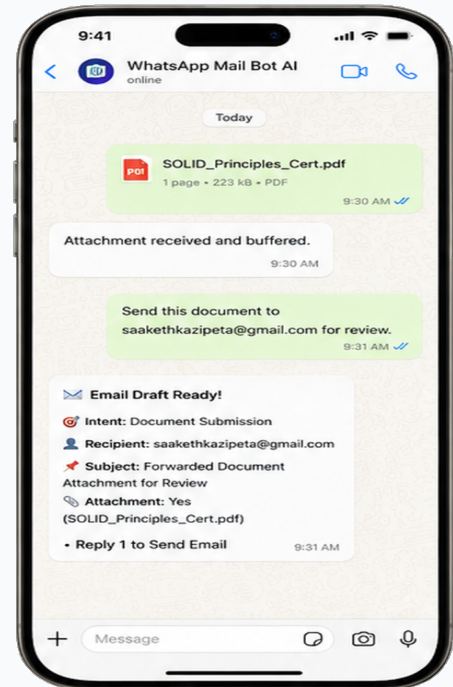

Visual Mockup — Capability 1

Capability 2: ■ PDF & Media Attachment Buffer Merging

Allows users to upload a PDF or image first, and follow up with a text instruction seconds later. The bot automatically merges the document attachment with the text prompt and analyzes file titles to generate specific email subjects.

■ **How to Try It:** Upload a PDF document first (e.g. *Certificate_SOLID_Principles.pdf*), then send: *'Fwd this above document to alex@company.com'*.

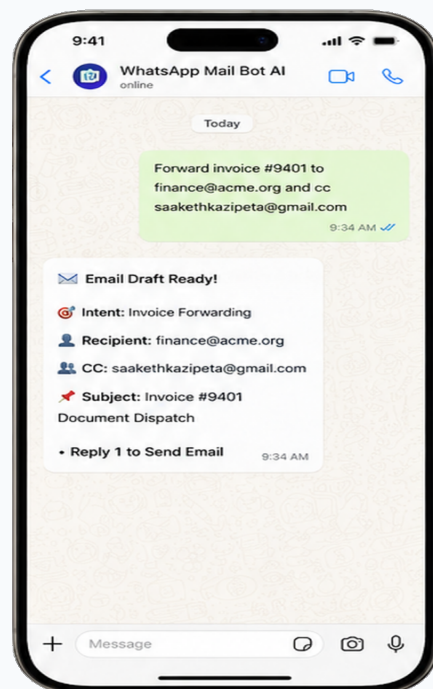

Visual Mockup — Capability 2

Capability 3: ■ Smart Recipient & Contact Resolution

Auto-extracts target email addresses (e.g. *alex@company.com*) or professional roles (e.g. *Hiring Manager*) directly from brief context. If no email is provided, it prompts you in chat to reply with the address.

■ **How to Try It:** Send a brief with recipient name or role: *'Send an email to HR Manager requesting an update on my application status.'*

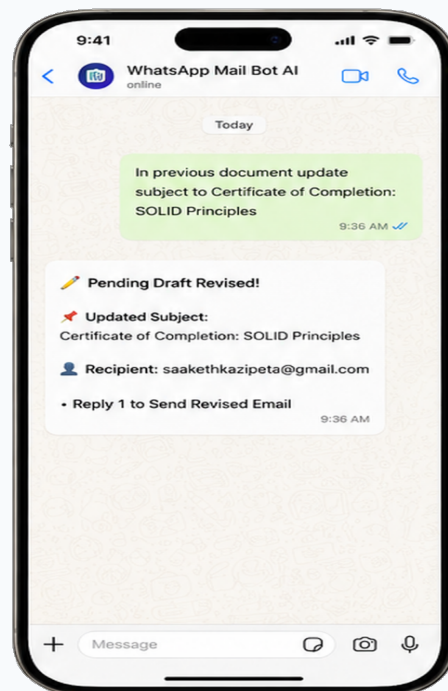

Visual Mockup — Capability 3

Capability 4: 🛠️ ■ Dynamic Draft Revision & In-Chat Editing

Modify tone, subject line, or recipient email directly inside WhatsApp. Send any feedback or modification note to immediately receive a updated draft preview card.

■ **How to Try It:** After receiving a draft card, reply in chat: *'Make the tone more formal and set subject to Urgent: Budget Review'*.

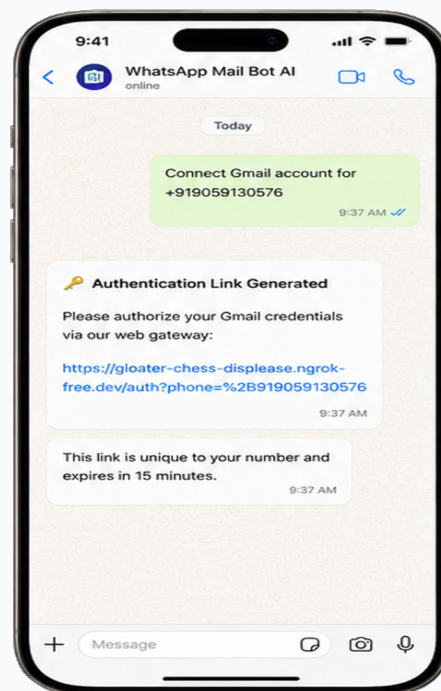

Visual Mockup — Capability 4

Capability 5: ■ Multi-User Token & Security Isolation

Links your WhatsApp phone number to isolated Google OAuth 2.0 or 16-character Gmail App Passwords stored in encrypted SQLite database (tokens.db). Supports LOGOUT directly in WhatsApp.

■ **How to Try It:** Reply **LOGOUT** or **UNLINK** in WhatsApp to immediately wipe saved credentials and disconnect your account.

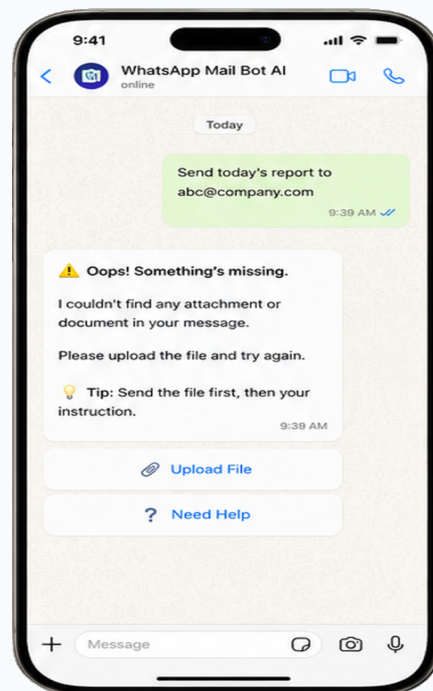

Visual Mockup — Capability 5

Capability 6: ■ 1-Click Instant Email Dispatch

Review the preview card in WhatsApp containing Intent, Recipient, Sender, Subject, and Attachment status. Reply **1**, **YES**, or **CONFIRM** to immediately send the email.

■ **How to Try It:** Once a draft card is displayed in chat, reply **1**. The bot delivers the email via Gmail and sends a delivery confirmation message.

Visual Mockup — Capability 6

3. WhatsApp In-Chat Commands Quick Reference

Command Keyword	Action & System Execution
1 / YES / CONFIRM	Dispatches the current pending email draft via your authenticated Gmail account and clears the draft queue.
LOGOUT / UNLINK / EXIT	Unlinks your Gmail account, deletes stored tokens from SQLite database, and clears active media buffers.
NEW / AUTH / RESET	Generates a new secure web link to connect or switch to a different Gmail account.
Text Brief	Triggers Gemini AI intent analysis and presents a formatted Email Draft preview card.
PDF / Image File	Buffers the media attachment for 3 minutes to auto-merge with quick follow-up text instructions.
